PROFESSIONAL SUMMARY

AI/ML Engineer specializing in MLOps, LLM systems, and Agentic AI with a strong focus on automation. Experienced in building production-grade machine learning pipelines, RAG systems, reinforcement learning agents, and AI-powered automation workflows using platforms such as n8n, Make, and Retell AI. Deep proficiency in LLM integration, API orchestration, and scalable agentic architectures that drive real business outcomes.

TECHNICAL SKILLS

Languages: Python, SQL, C, C++

Machine Learning: NLP, LLMs, RAG, Reinforcement Learning, Scikit-learn, PyTorch

MLOps: MLflow, Docker, Kubernetes, CI/CD, Model Deployment, Drift Detection

Tools & Frameworks: FastAPI, ChromaDB, BM25, Streamlit, Plotly, Git, REST APIs

Automation: n8n, Make, AI Agents, Workflow Automation

EXPERIENCE

Agentic AI Developer – DesignMindScape Sep 2025 – Present

- Developed Agentic AI applications for intelligent automation tasks
- Built and optimized deep learning pipelines, integrating APIs, AI models, and automation workflows into scalable systems
- Contributed to prompt engineering, model optimization, and deployment workflows
- Explored autonomous AI agents and multi-agent systems for real-world use cases

Freelance AI & Automation Developer – Self-Employed 2026 – Present

- Built AI automation workflows using n8n for diverse business use cases
- Developed AI agents for lead generation and process automation
- Integrated APIs and LLMs into scalable, production-ready systems

Backend Engineering Intern – Speridian Technologies Jun 2024 – Aug 2024

- Developed and maintained backend systems using C and SQL
- Optimized database queries and managed structured data pipelines

PROJECTS

AI Resume Screening Agent | Make, OpenAI, Google Workspace, Slack

- Automated end-to-end recruitment workflow: Google Forms intake, AI evaluation, and Slack alerts for strong candidates
- Built hybrid RAG-based evaluation agent scoring candidates on technical skills, experience, education, domain expertise, and hiring risks
- Generated structured outputs including fit scores, candidate summaries, key strengths, gaps, and tailored interview questions

Mini-LLM — GPT-Style Language Model from Scratch | PyTorch

- Built a 3.25M-parameter decoder-only Transformer entirely from scratch in PyTorch without HuggingFace or pre-trained components
- Implemented multi-head causal self-attention, Pre-LayerNorm transformer blocks, GELU feed-forward networks, weight tying, and autoregressive text generation

- Trained on a 4.9MB rap lyrics corpus (~5M characters) using a custom character-level tokenizer and cosine annealing; achieved 3.91 validation perplexity after 30 epochs

Retrieval-Augmented Generation (RAG) System / *ChromaDB, BM25*

- Developed hybrid RAG pipeline combining ChromaDB, BM25, and reranking for improved retrieval accuracy
- Implemented document processing and chunking pipeline for LLM ingestion; evaluated performance using standard RAG metrics

Reinforcement Learning Trading Agent / *Python, PyTorch*

- Built RL-based trading agent optimizing buy/sell strategies using custom reward functions and policy optimization
- Designed simulation environment for training and evaluation with comprehensive performance tracking

AI Instagram DM Agent / *n8n, ManyChat, OpenAI*

- Built Instagram DM automation system integrating n8n, ManyChat webhooks, and OpenAI for intelligent conversational responses
- Implemented persistent chat memory with custom AI personality and system prompts for consistent brand voice

EDUCATION

BS Artificial Intelligence 2022 – 2026

FAST National University of Computer and Emerging Sciences
